Funded by Hogthrob (STVF 2059-03-0027)

The Hogthrob project

- Developing a sensor network infrastructure for sow monitoring
- Functionalities
 - Tracking
 - Detecting *heat* period
 - ...
- Low Cost (~1 €)
- Low Energy (2 years lifetime)
- Consortium:
 - DTU, DIKU, KVL
 - National Committee for Pig Production
 - IO Technologies

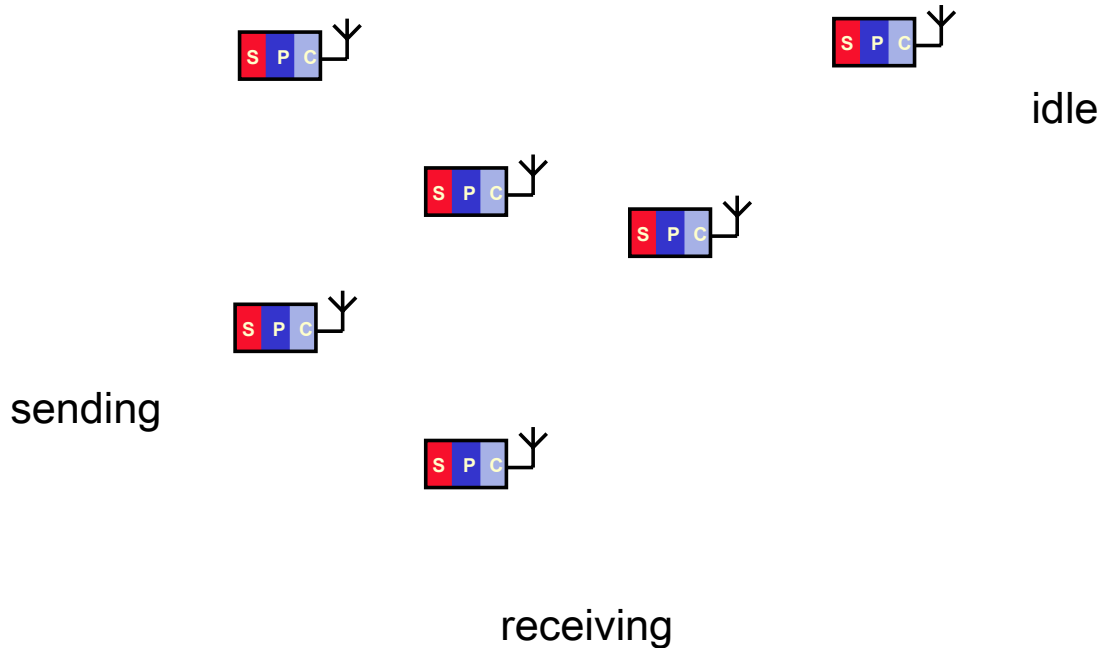

Sensor networks

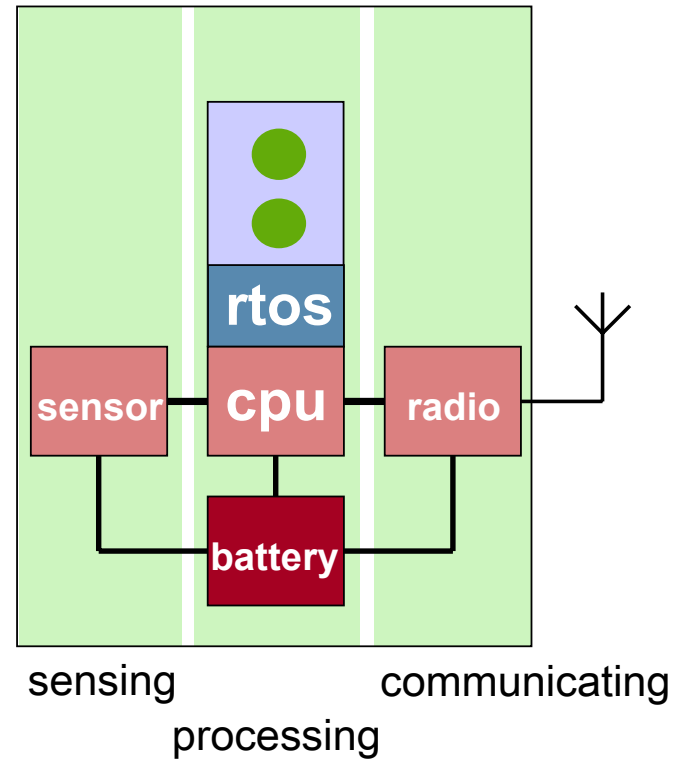

Sensor networks

Sensor node

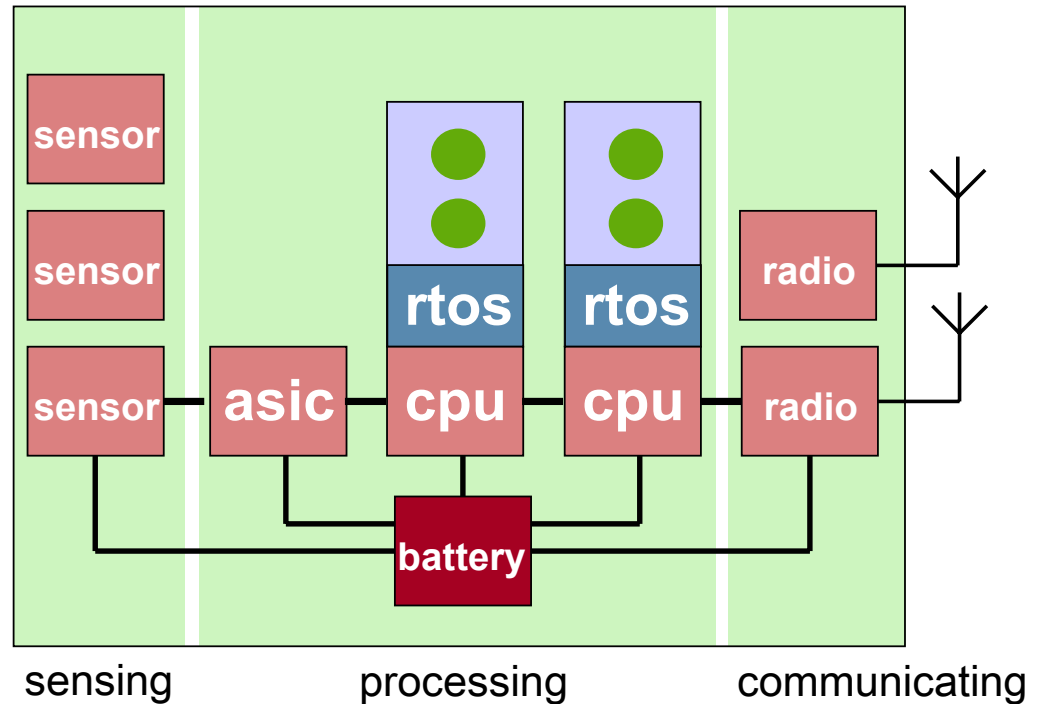

- Ultra low energy
- **Low flexibility**
- Ultra low cost (1€)
- Small size (1..10 Mtr)
- Low clock frequency
- CPU/DSP and RF dominated
- Limited memory
- **Hardware/software codesign**

Sensor node design

Sensor node: Uni-processor ...

Framework to experiment with different RTOS strategies

Focus on analysis of **timing**, **energy** and resource sharing

Abstract software model, i.e. no behavior/functionality

Easy to create tasks and implement RTOS models

Based on **SystemC**

System model

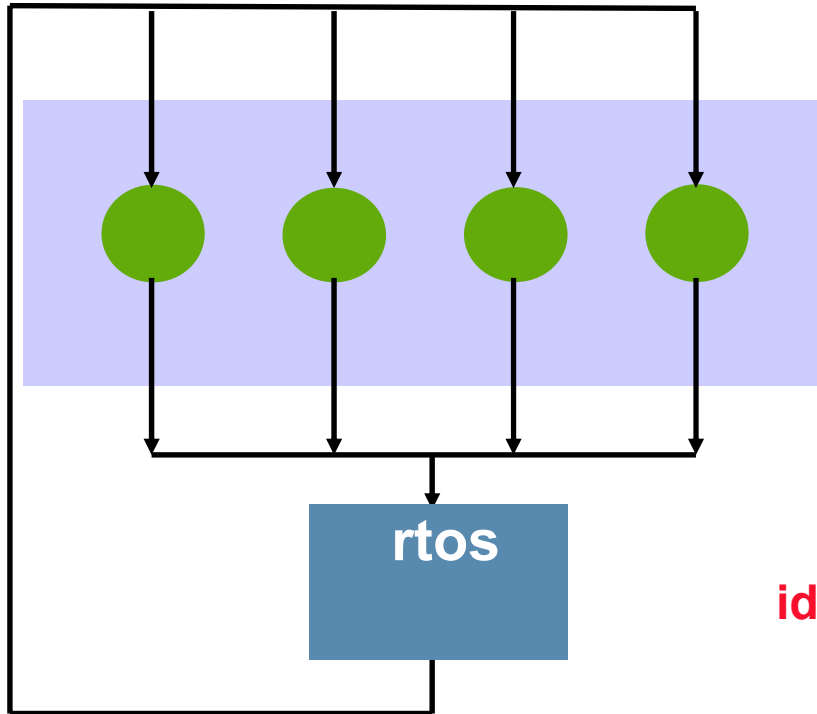

rtos

- Task messages:
 - `ready`
 - `finished`
- RTOS commands:
 - `run`
 - `preempt`
 - `Resume`

System model - SystemC

```
pa = new  
    task("task_a",1,50,3,12,0,ready);  
registerTask(pa);
```

```
pb = new  
    task("task_b",2,40,2,10,0,ready);  
registerTask(pb);
```

```
pc = new  
    task("task_c",3,30,1,10,0,ready);  
registerTask(pc);
```

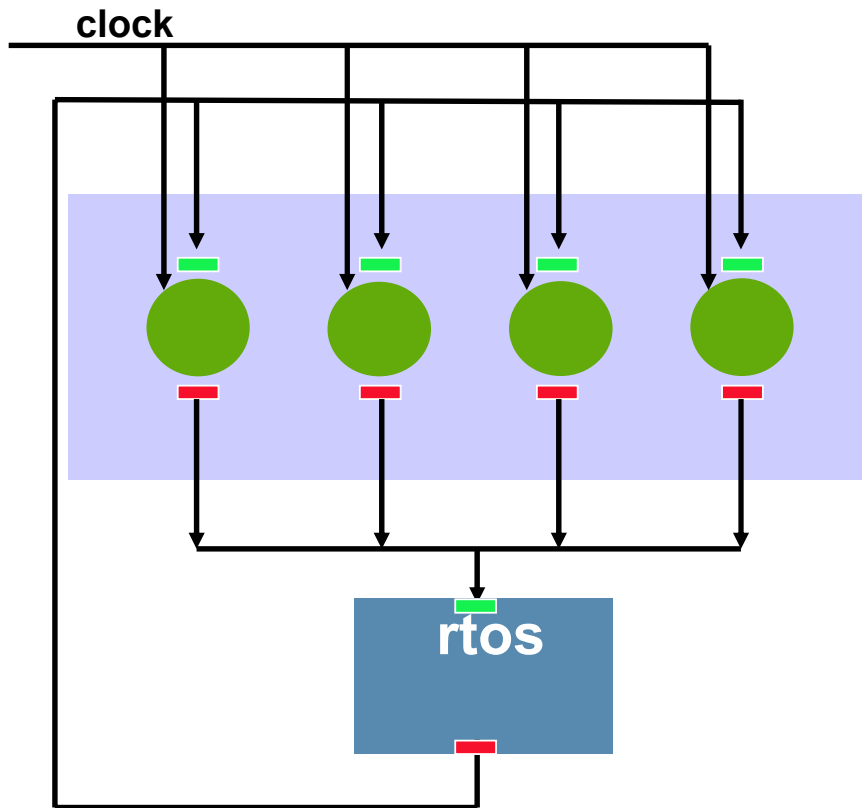

identifier

period

priority

WCET

offset

- Aim: Adding tasks without having to create separate communication links
- Uses the SystemC **master-slave** library
- If two tasks send a message at the same time – they are executed in sequence, but in undefined order
- Global "clock" is used to keep track of time

❖ Task model

r_1 = time at which task becomes **released (or active)**

s_1 = time at which task **starts** its execution

e_1 = worst case **execution** time (WCET)

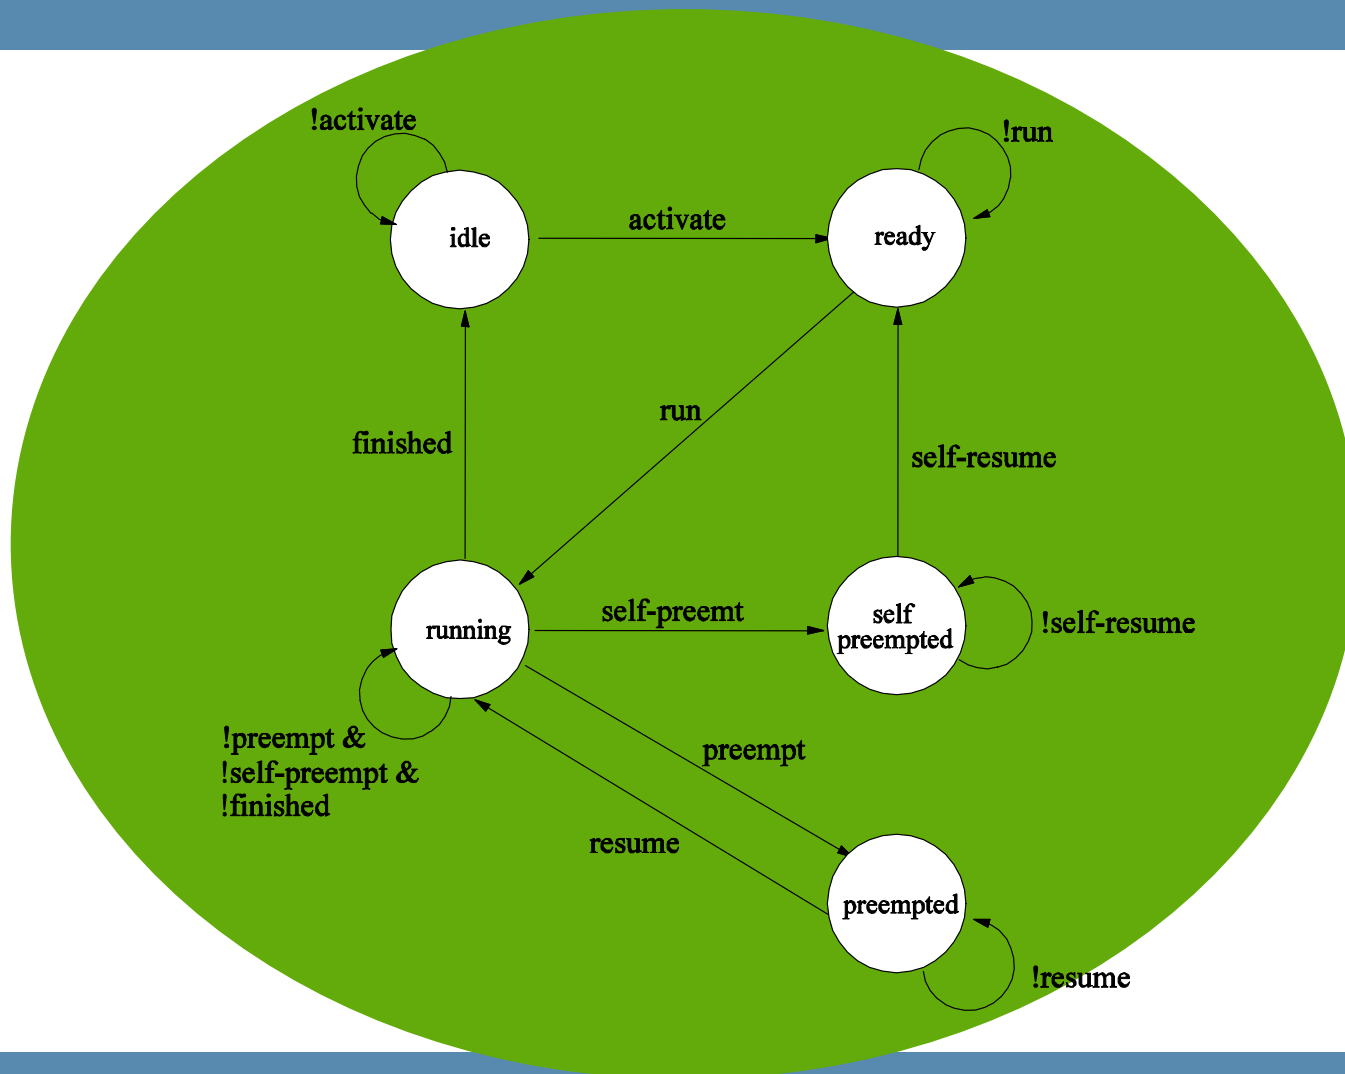

d_1 = **deadline**, task should complete before this!

T_1 = **period**, minimum time between task releases

o_1 = **offset (or phase)** for first release

Task model

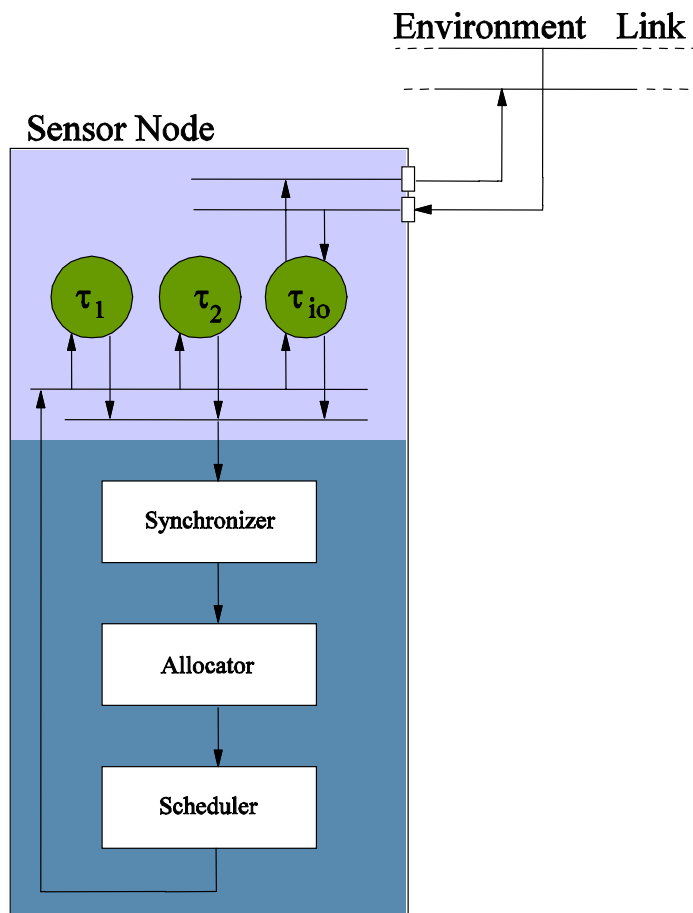

Sensor network model

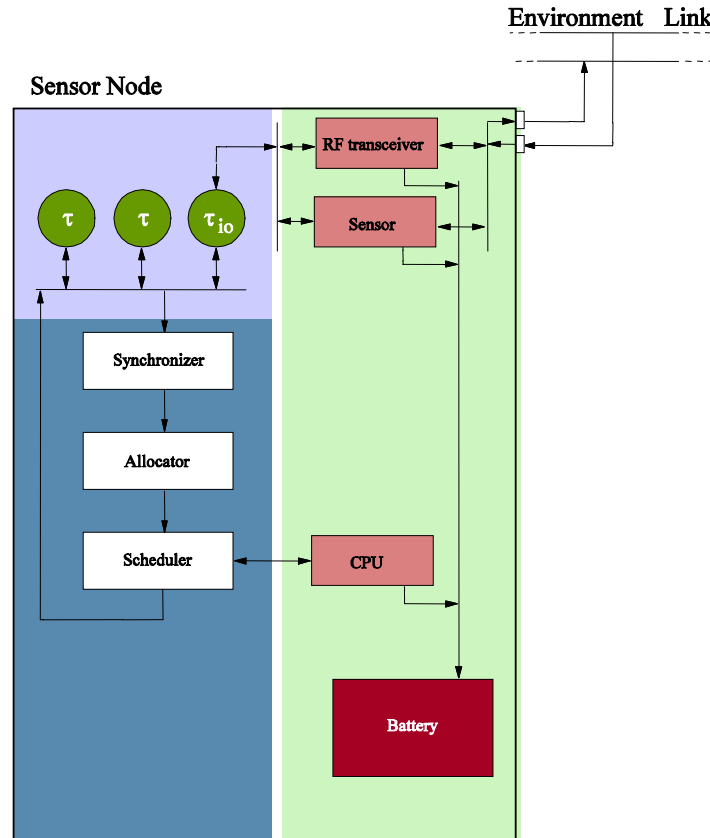

Sensor node model

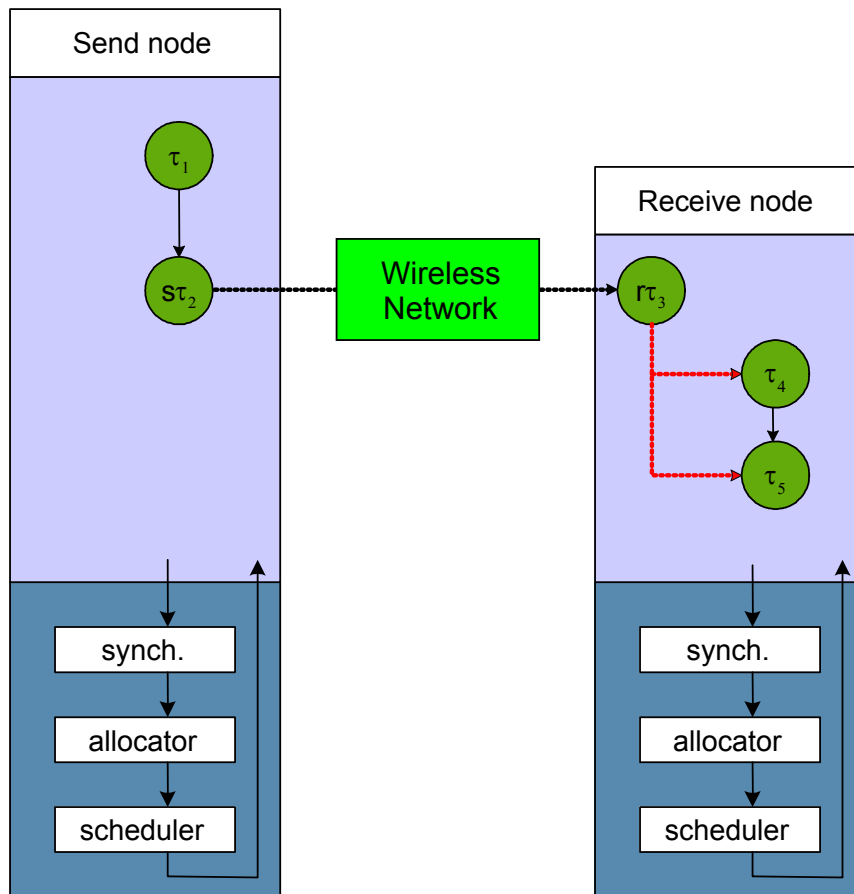

Energy modeling

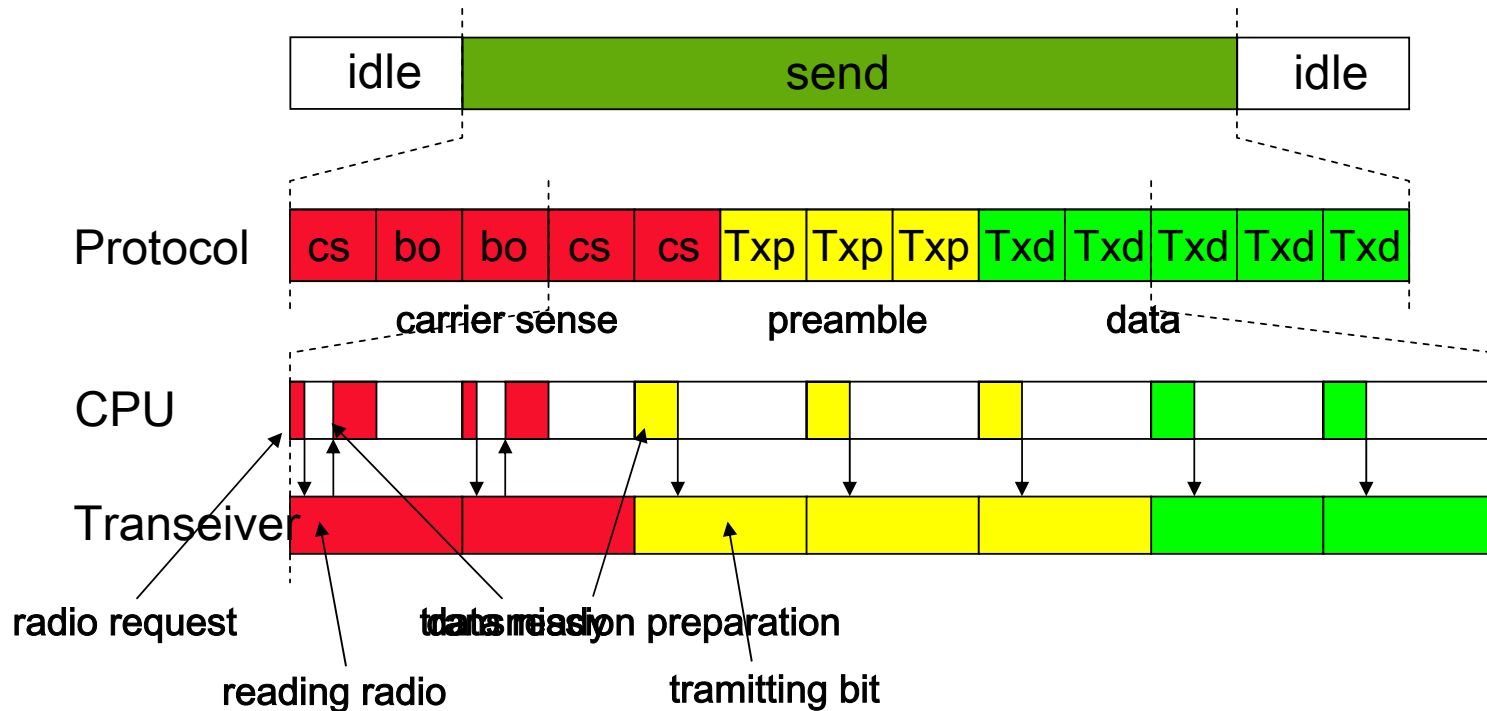

Communication example

❖ Modeling radio communication

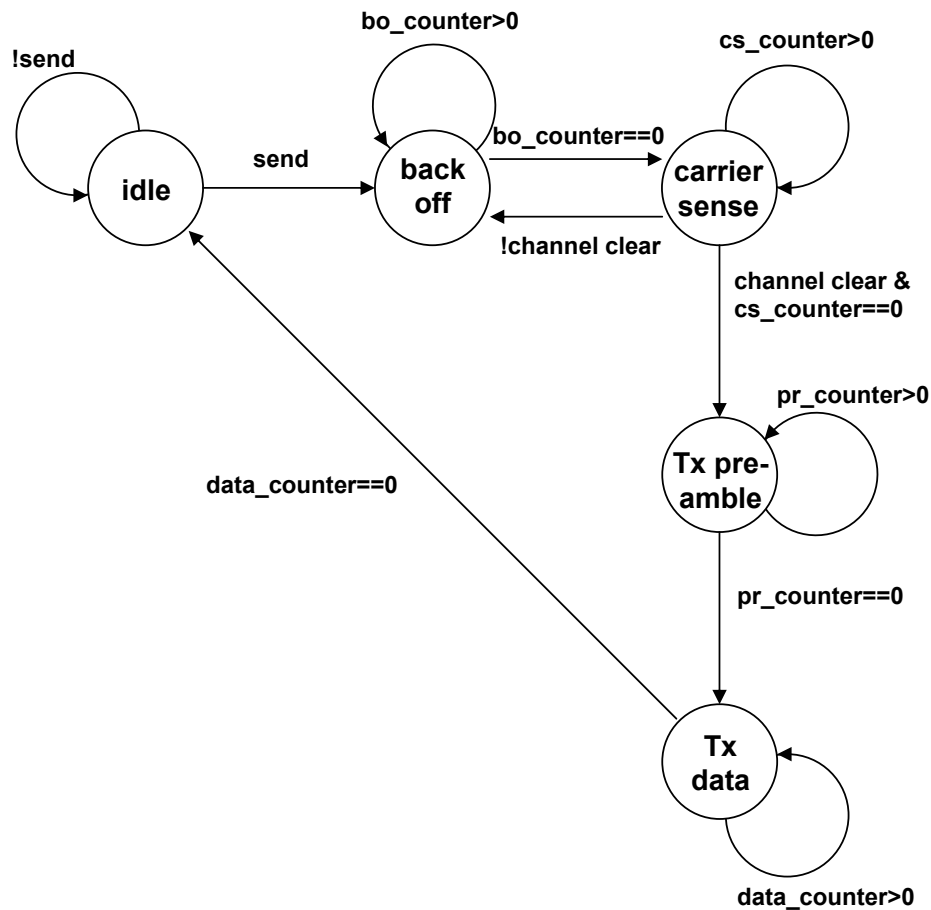

Modeling the CSMA protocol

Sender:

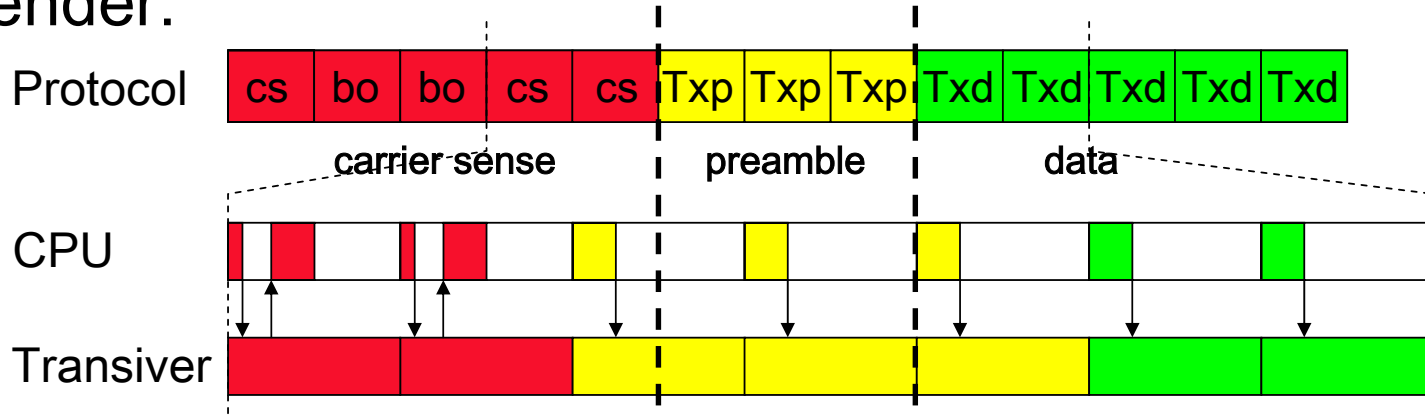

CSMA Protocol for sending

Modeling radio communication

Sender:

Receiver:

Sensor network example

Example 1

Example 2

Legend: ● sending and receiving nodes

● receiving nodes

Example 1: Simple broadcast

Sending task
 0 = idle
 1 = carrier sensing
 2 = back-off
 3 = transmit preamble
 4 = transmit data

Receiving task
 0 = idle
 1 = polling
 2 = synchronize
 3 = receive data

Application task
 0 = idle
 1 = ready
 2 = running
 3 = preempted
 4 = self-preempted

	0us	100us	200us	300us	400us	500us	600us	700us	800us	900us												
Node1_Processing_Task	2	2	2	2	2	2	2	2	2	2												
Node1_Receive_Protocol			1			0	1	0	1	0	1	0	1	0	1	0						
Node1_Receive_Task			0			0	0	0	0	0	0	0	0	0	0	0						
Node1_Send_Protocol		2	1	3	4			0														
Node1_Send_Task	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4						
Node2_Receive_Protocol	1	0	1	0	1	0	1	0	1	2	3	0	1	0	1	0	1	0	1	0	1	0
Node2_Receive_Task	0	0	0	0	0	4	4	4	4	0	0	0	0	0	0	0	0	0	0	0	0	0
Node3_Receive_Protocol	1	0	1	0	1	0	1	0	1	2	3	0	1	0	1	0	1	0	1	0	1	0
Node3_Receive_Task	0	0	0	0	0	4	4	4	4	0	0	0	0	0	0	0	0	0	0	0	0	0

Example 2: Radio interference

Sending task

- 0 = idle
- 1 = carrier sensing
- 2 = back-off
- 3 = transmit preamble
- 4 = transmit data

Receiving task

- 0 = idle
- 1 = polling
- 2 = synchronize
- 3 = receive data

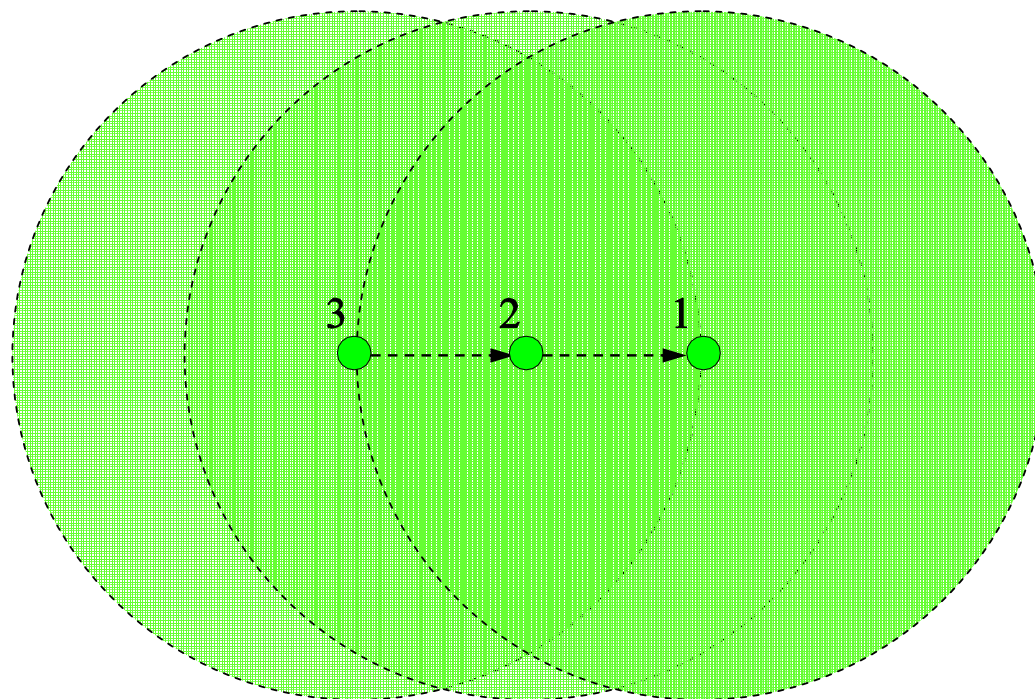

Application task

- 0 = idle
- 1 = ready
- 2 = running
- 3 = preempted
- 4 = self-preempted

	0us	100us	200us	300us	400us	500us	600us	700us	800us	900us									
Node1_Receive_Protocol			1			0	1	0	1	0	1	2	3	0					
Node1_Receive_Task			0			0	0	0	0			4	4	4	4	4	4	4	0
Node1_Send_Protocol			2	1	3	4				0									
Node1_Send_Task	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4
Node2_Receive_Protocol								1											
Node2_Receive_Task								0											
Node2_Send_Protocol			2	1	2	1	2	1	3	4	0								
Node2_Send_Task	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4
Node3_Receive_Protocol	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
Node3_Receive_Task	0	0	0	0	0	0	4	4	4	4	0	0	0	0	0	0	4	4	4
Node4_Receive_Protocol	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
Node4_Receive_Task	0	0	0	0	0	0	4	4	4	4	0	0	0	0	0	0	4	4	4
Node5_Receive_Protocol	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
Node5_Receive_Task	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	4	4	4

Example 3: Network routing

Legend: ● sending and receiving nodes

● receiving nodes

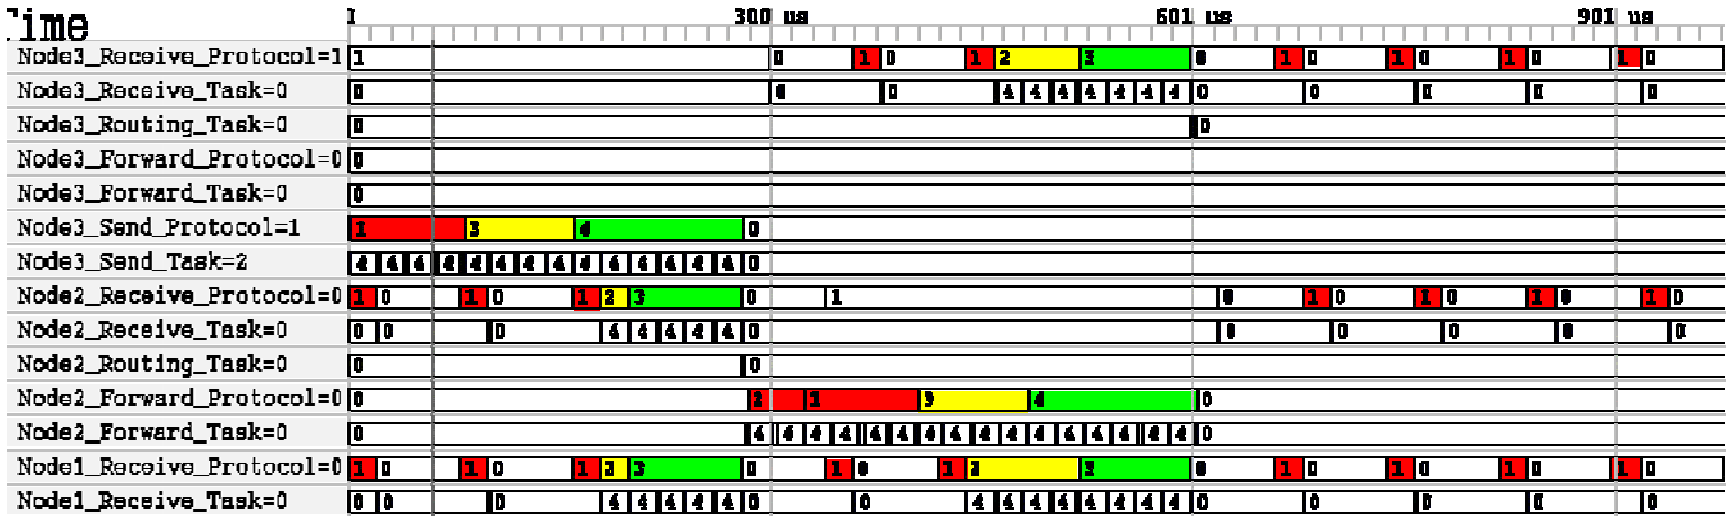

Example 3: Routing

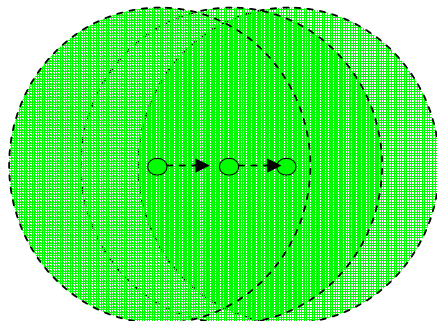

Sending task
 0 = idle
 1 = carrier sensing
 2 = back-off
 3 = transmit preamble
 4 = transmit data

Receiving task
 0 = idle
 1 = polling
 2 = synchronize
 3 = receive data

Application task
 0 = idle
 1 = ready
 2 = running
 3 = preempted
 4 = self-preempted

Example 3: Battery shortage

- | | | |
|-----------------------|-----------------------|-------------------------|
| Sending task | Receiving task | Application task |
| 0 = idle | 0 = idle | 0 = idle |
| 1 = carrier sensing | 1 = polling | 1 = ready |
| 2 = back-off | 2 = synchronize | 2 = running |
| 3 = transmit preamble | 3 = receive data | 3 = preempted |
| 4 = transmit data | | 4 = self-preempted |

Node 2 runs out of battery

- SystemC based framework to study the dynamic behavior of a sensor network
- Exploring global effects of sensor node design
- Example sensor network based on Mica-nodes and TinyOS from UC Berkeley
- Work in progress
 - Power/energy models for power management
 - Mobile sensor nodes
 - Detailed component models
- To be used in the Hogthrob project

Thank you
