

RWTHAACHEN
UNIVERSITY

A Design Methodology for Software Defined Radios Reconciling Portability with Efficiency

Torsten Kempf

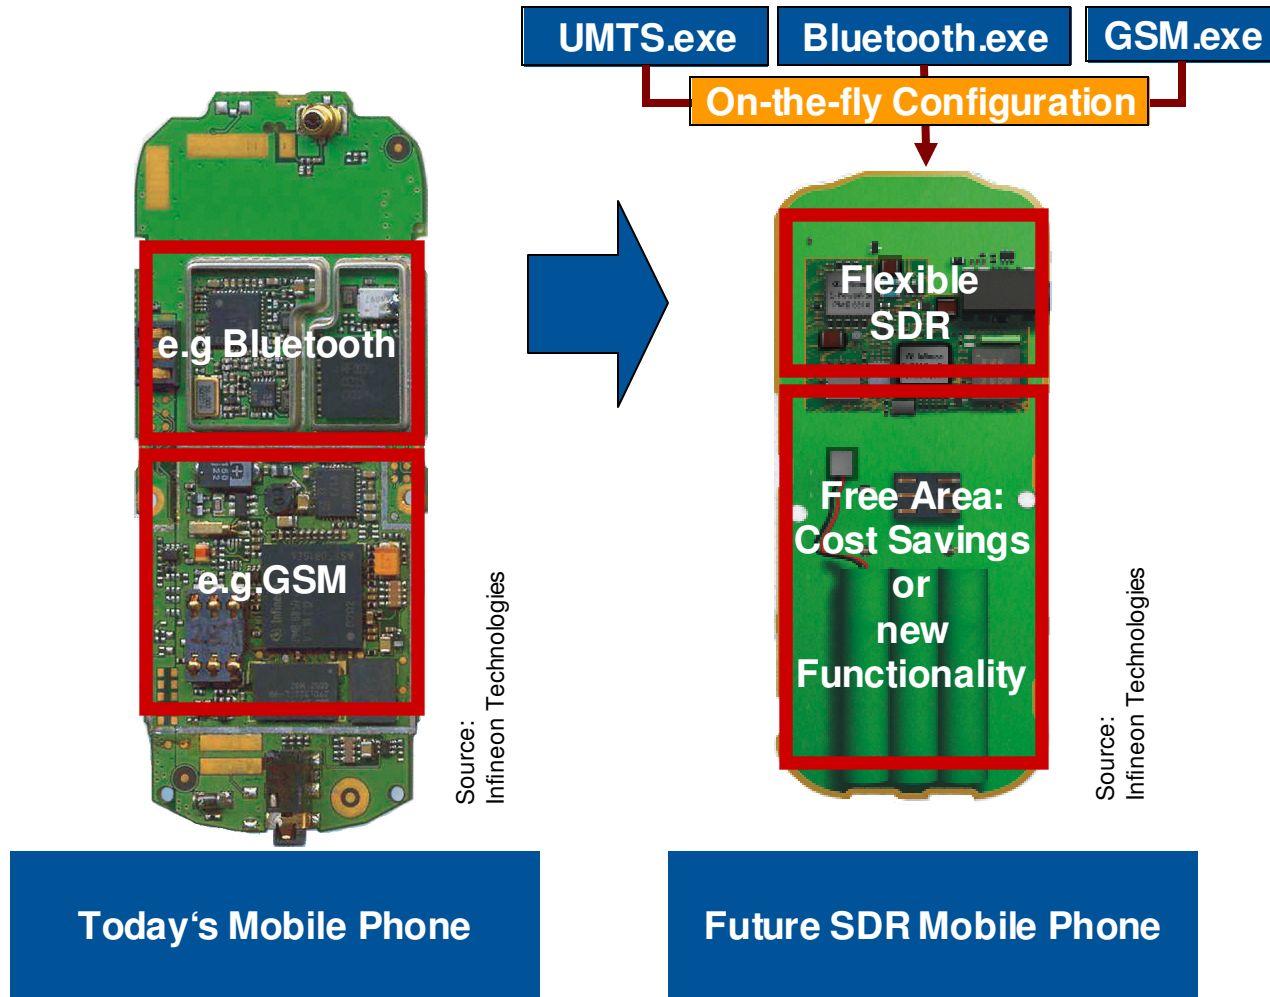

(on behalf of the Nucleus team)

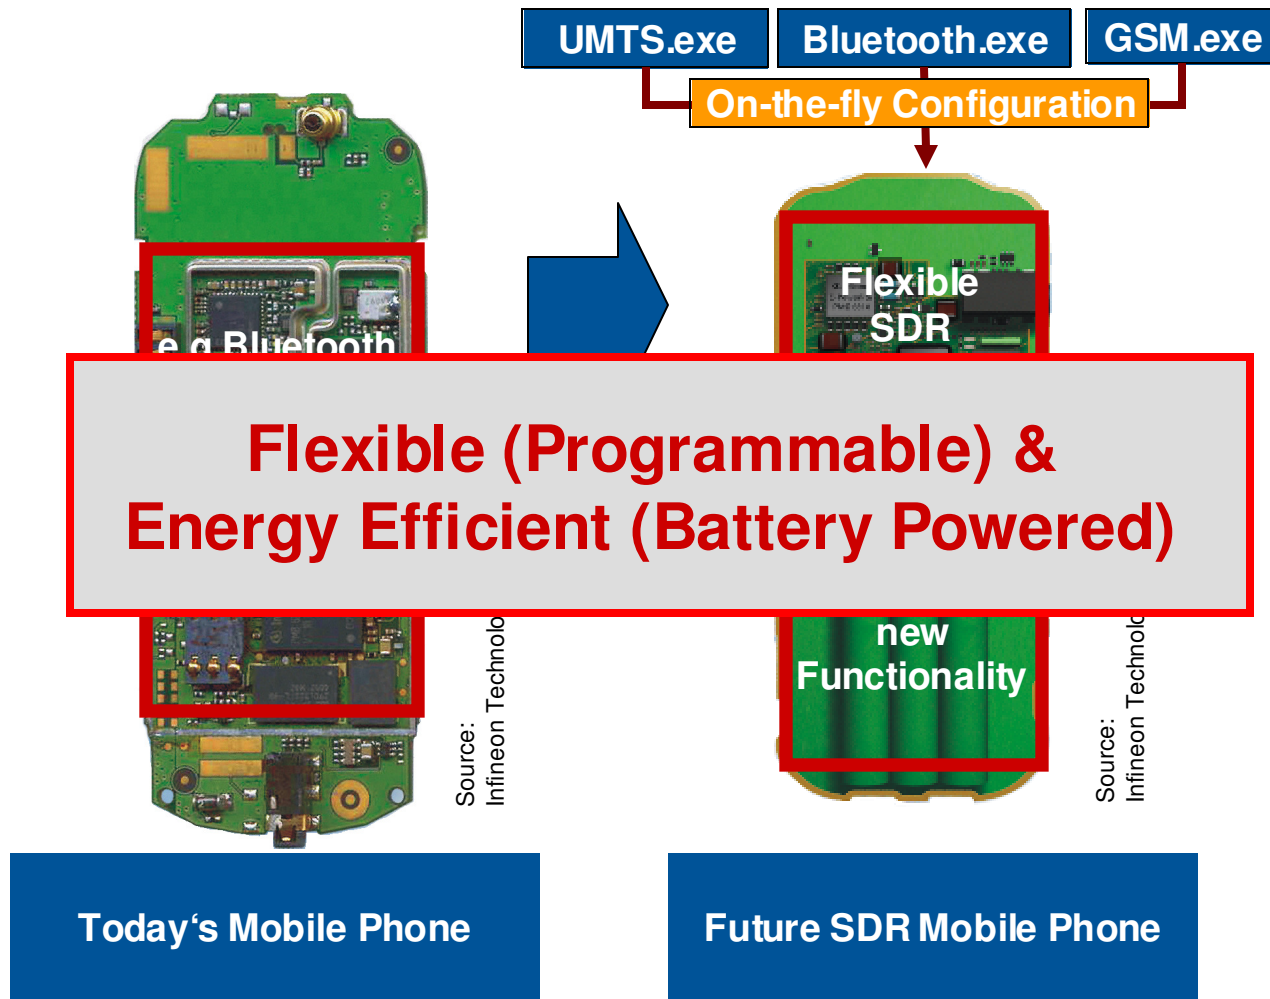

RWTH Aachen University, Germany

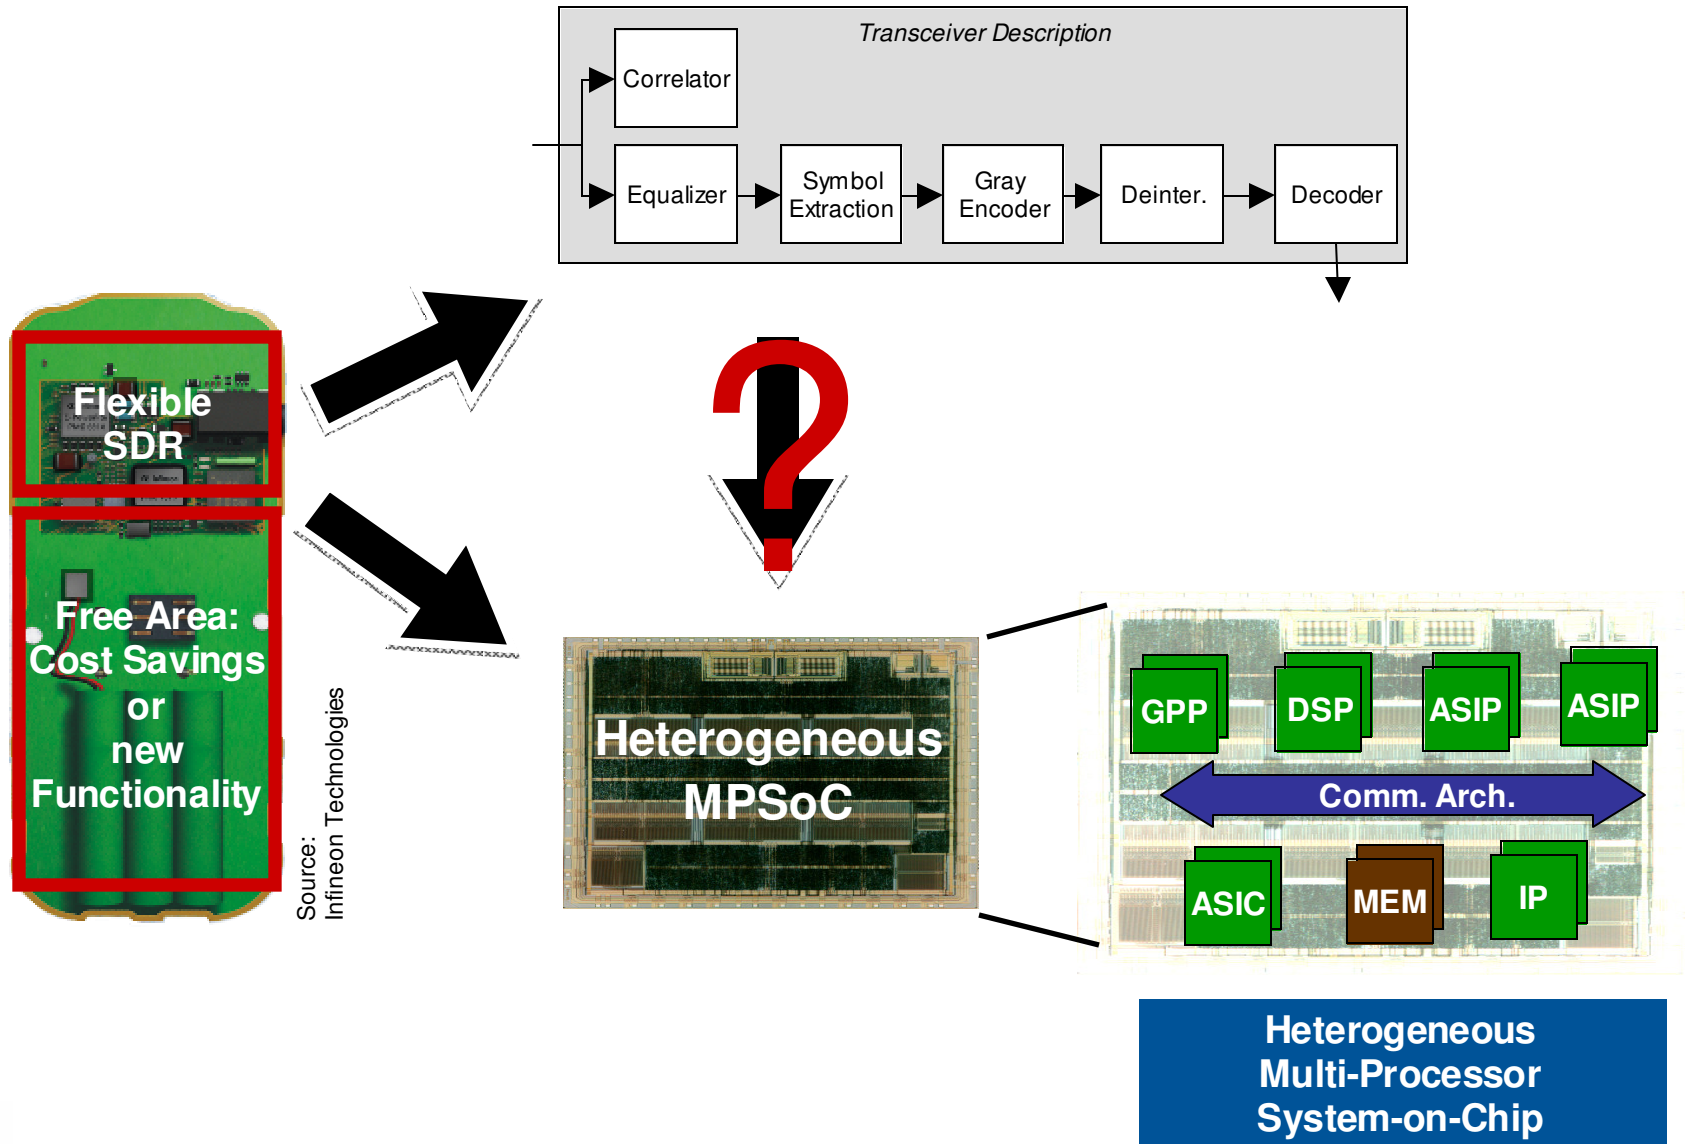

MPSoC 2009

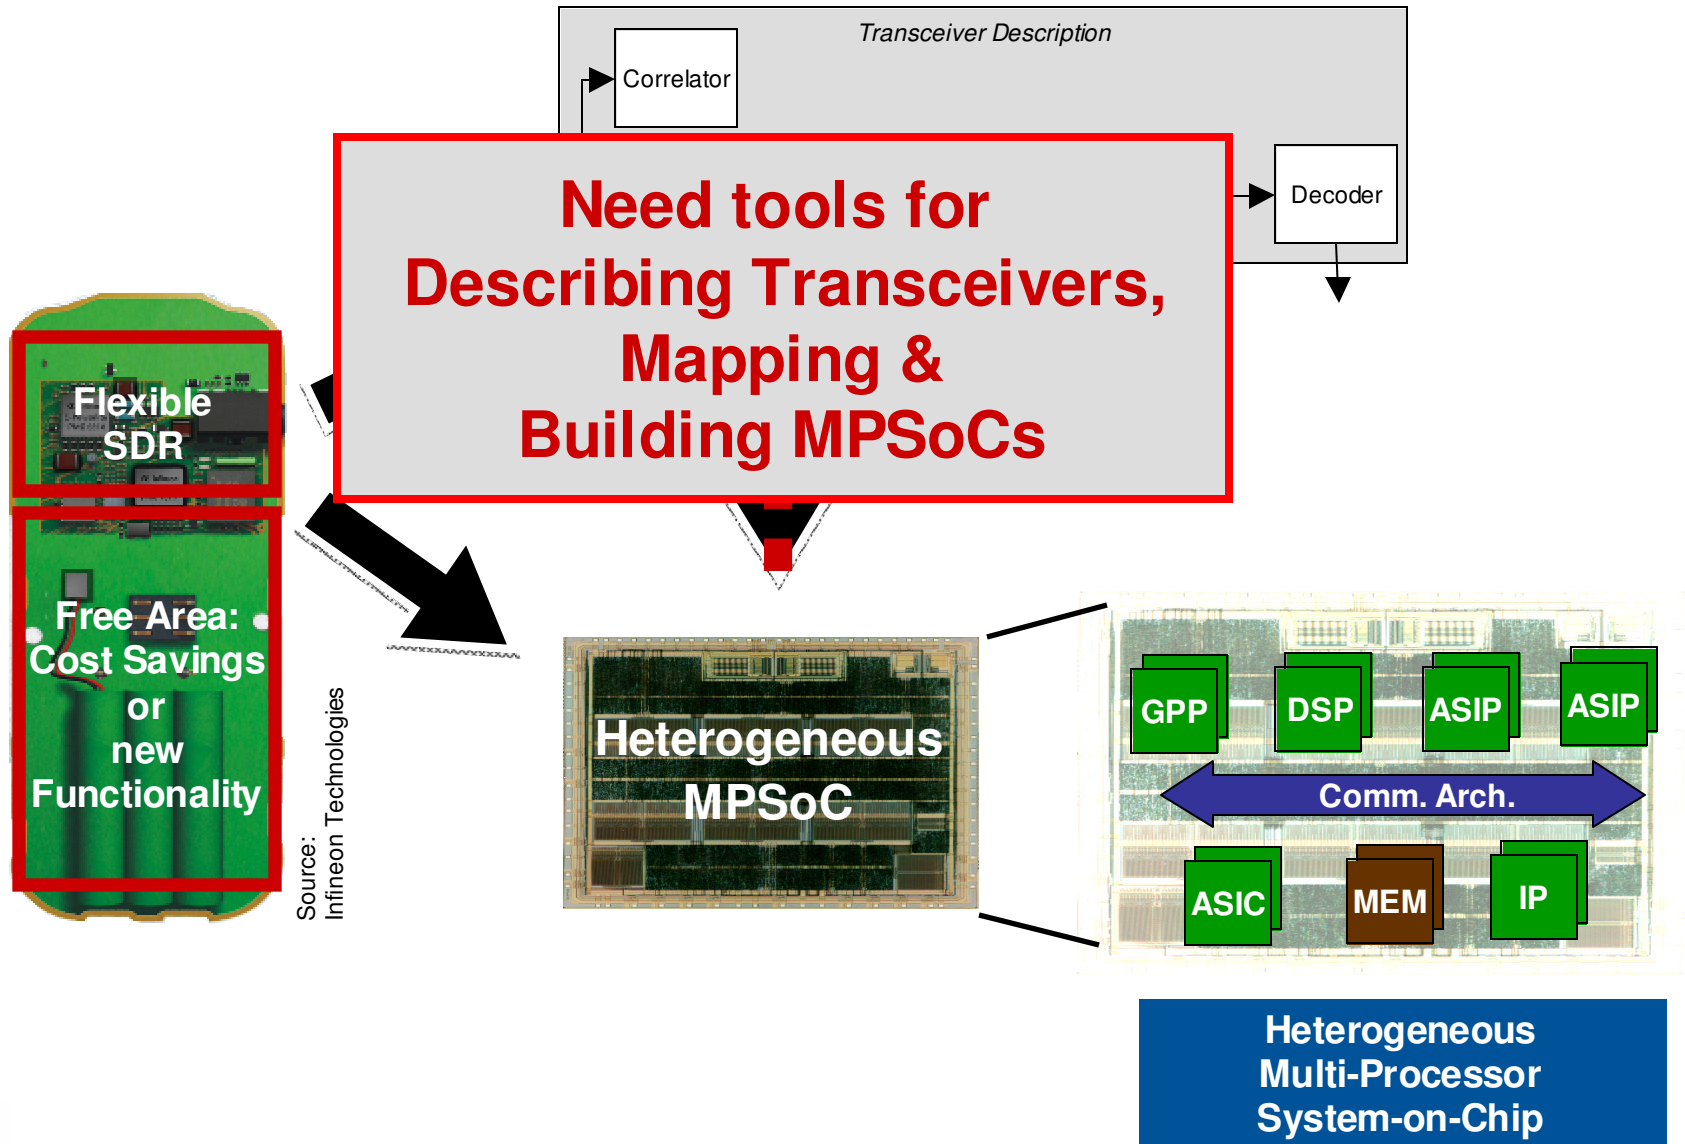

Institute for Integrated Signal Processing Systems

Software Designer's View

Portable Design

- Pure Software Solutions
- High Level Language Implementations

Efficiency?

Hardware Designer's View

Maximum Efficiency

- Pure Hardware Solution
- Minimize flexibility (e.g. ASICs)

Flexibility?

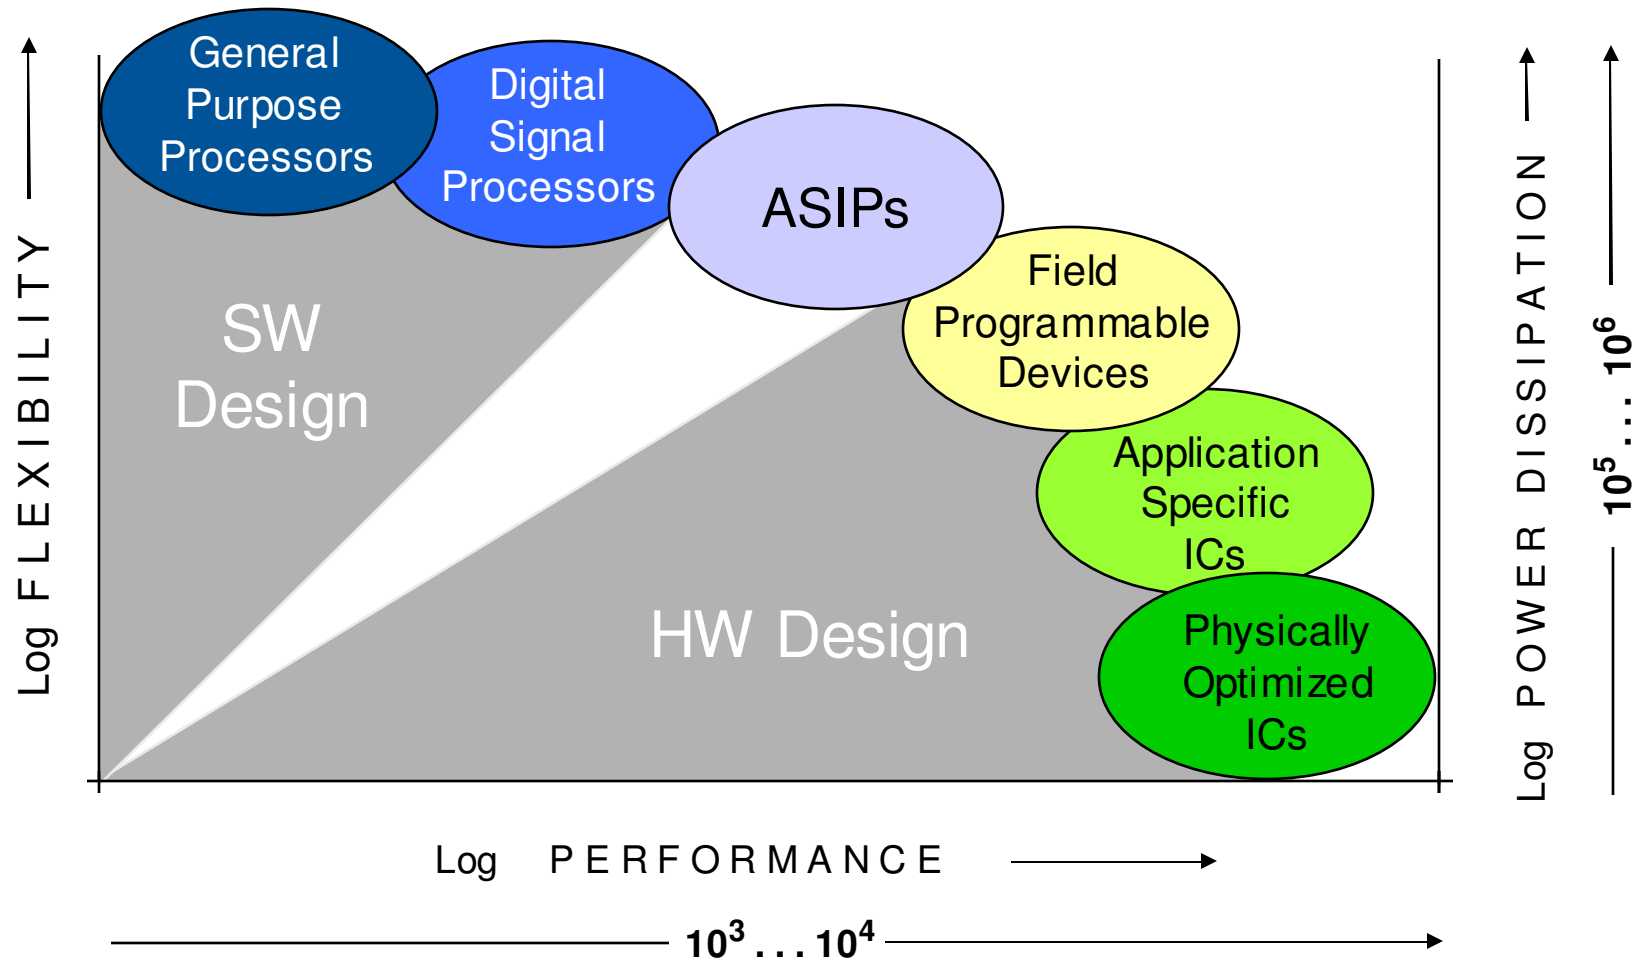

No!

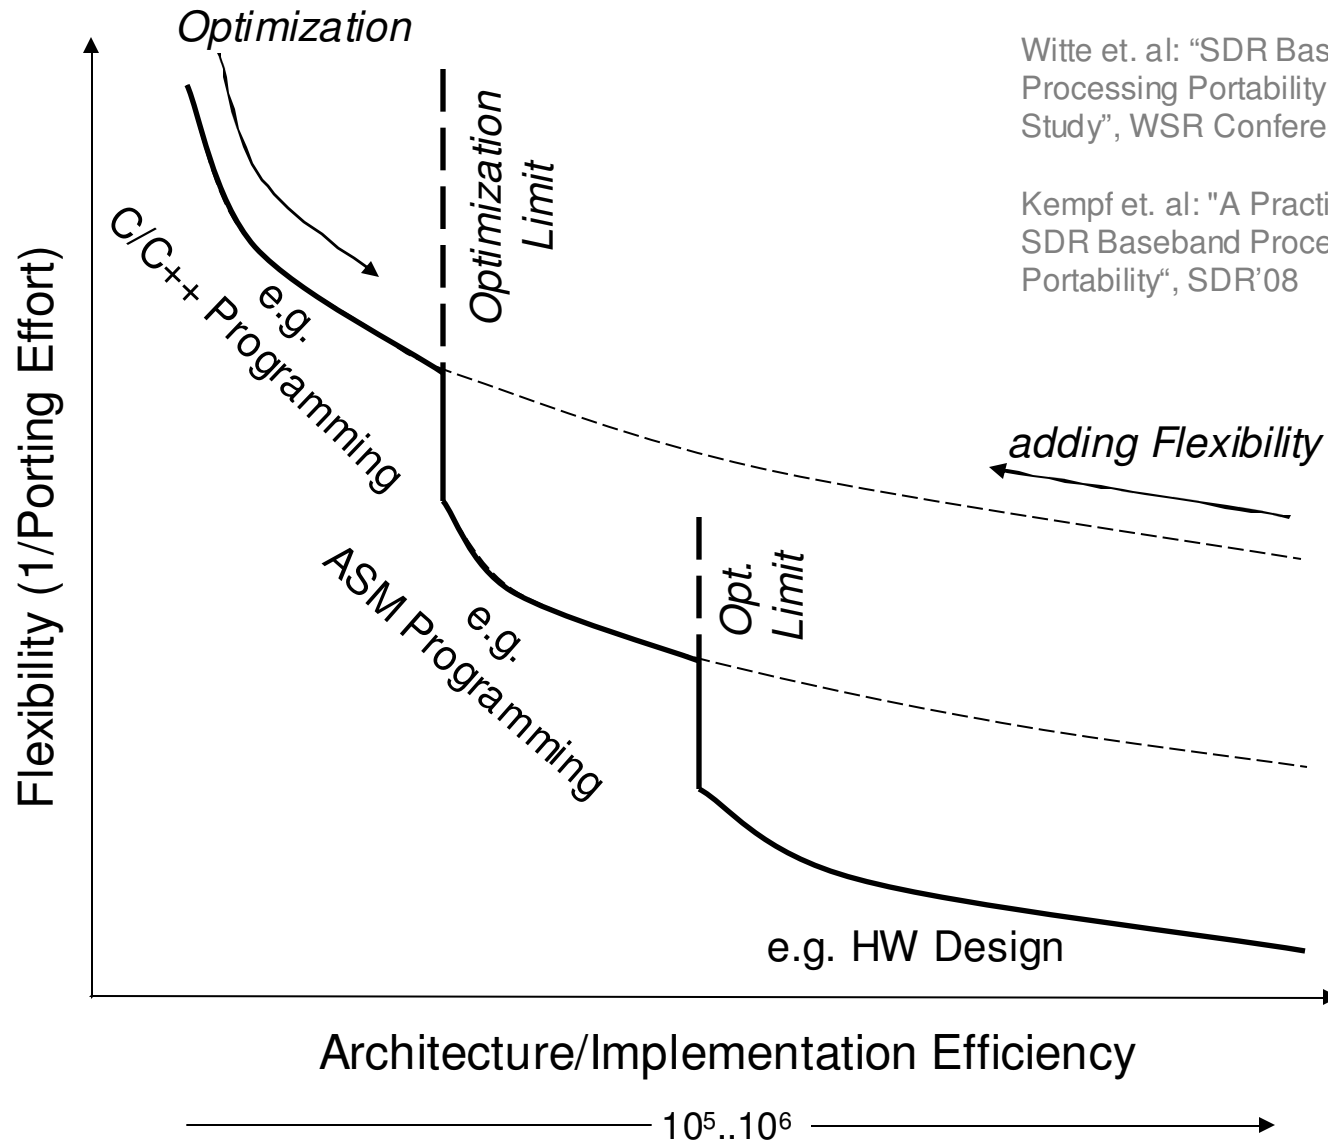

Trade-off decision!

Cost Functions:

- Flexibility: e.g. Flexibility/Portability $\sim 1 / \text{Porting Effort}$
- Efficiency: e.g. Energy Efficiency $\sim \text{Bits} / \text{s} / \text{Watt}$

Improvement of Design Methodology

Nucleus

- Critical, demanding, algorithmic kernel
- Captures common kernels among different transceivers
- Not waveform nor hardware specific

- **Transceiver description composed of**
 - Nuclei & Non-Nuclei
- **Advantages**
 - Portable and efficient
 - Reusable and interchangeable
 - Fast assembly of new transceiver descriptions
 - Interoperability
 - Loadability
